

Model 7730DT

This is a high-capacity direct-push rig with a durable undercarriage, hollow stem auger capabilities, and a rubber track wide-base platform. The heart of the 7730DT is the powerful GH62 hammer that was designed specifically for direct push applications. The 7730DT is productive in both shallow and deep sampling venues. The stronger, wider undercarriage allows the 7730DT to be used on concrete or pavement, and enables the rig to readily negotiate tight, confining work areas, and on offroad, rugged terrain.

Model 7700/PC111

WDC has combined the direct-push drilling technology with a probe carrier that makes use of 160 cubic feet of dry storage space. The brand new 7700 features a 77-inch stroke, 5-inch diameter main cylinder that provides 35,000 lbs. of down force and greater than 47,000 lbs. pull back. The rig is equipped with a GH62 hammer that provides 1920 blows per minute and delivers forces great then 80,000 pounds per blow to the top of the probe rod. The 7700/PC111 versatility allows conversion from direct-push to auger in less than 5 minutes.

Model 6620DT

Wider tracks and a heavy-duty undercarriage provide the foundation for the Model 6620DT's robust design. The stronger, wider undercarriage allows this direct push rig to be used on concrete or pavement, and enables the rig to readily negotiate in tight, confining work areas and on offroad, rugged terrain.

Personnel

All WDC rig operators and rig hands are trained professionals with the experience and skills required to perform work at any site including:

- All Major Oil Company Specific Training
- OSHA 40 Hour HAZWOPER Training
- MSHA Training
- OSHA Certified Forklift Training
- WDC SAFETY ALWAYS Training

Albuquerque 800.914.7506
Indianapolis 317.872.1203
Las Vegas 702.558.9800
Los Angeles 800.974.2769
Phoenix 800.584.6471
Sacramento 800.873.3073
San Francisco 510.236.6282
