

400RS Sonic

This is the heavy hitter of WDC's sonic fleet. This versatile rig is capable of drilling at an angle (up to 45 degrees from vertical), preform mud and air-rotary, and collection of continuous cores (4" to 8" dia.). It's ideal for installation of 2" and 4" wells when un discuss depth and geology limitations when considering this method)

Capabilities include:

- Single/nested well installations
- Westbay/CMT well installations
- Telescope temporary conductor casing installations to seal off critical zones

MiniSonic

WDC's Mini Sonic fleet consists of Geoprobe 8140 and 8140LC sonic rigs. The rigs are rubber-track mounted drill units, capable of advancing 4" and 6" core barrels. The equipment is capable of 2" and 4" well installations, telescoping casing techniques and depth discrete soil vapor and water sampling operations. With a drilling angle of vertical to 35° off vertical and a working height of 14' (8140LC model), these limited access sonic platforms are a versatile addition to WDC's sonic drill rig fleet.

Personnel

All WDC rig operators and rig hands are trained professionals with the experience and skills required to perform work at any site including:

- All Major Oil Company Specific Training
- OSHA 40 Hour HAZWOPER Training
- MSHA Training
- OSHA Certified Forklift Training
- WDC SAFETY ALWAYS Training

WDC Exploration & Wells has long been a legendary pioneer of casing advance drilling technologies and continues this tradition with our extraordinary fleet of new sonic rigs. The WDC SuperSonic, and MiniSonic drilling rigs have been designed around our customer's needs of safety, reliability, and performance.
